

MENÜ

WHY SMART FOOD

For us at **SmartKook** it is a necessity to eat in a conscious way!

We are not doctors nor dieticians, but we know that a varied diet is good for our health: at **SmartKook** you can choose among several **smart-ingredients**.

We select high quality products and rely on studies and scientific researches, which teach us how food interacts with our organism (Nutrigenomica).

We are what we eat (Ludwing Feuerbach-1804) and this is especially true in the mid-long term.

We started a process of discovering (and rediscovering) the ingredients and foods that some Italian researches have defined "**samt food**". We use a good number of them in order to let our clients build a different menu each day, conscious, personalized and **SMART!**

SmartKook is Longevity Food (LF) - Protective Food (PF) - Anticancer Food (AF):

Longevity Food

Recent research have shown that the molecules contained in some foods can "help" into the epigenome, or DNA, and change those sections that affect the duration of our life, by activating longevity genes. Among these foods we can find:

- Anthocyanins: purple cabbages, cherries, blood oranges, blueberries, aubergines, purple and sweet potatoes, black prunes, radicchio salad, black grapes, berries
- Capsaicin: chilli pepper and spicy paprika
- Curcumin: turmeric
- Epigallocatechin gallate: green and black tea
- Fisetina: khaki, strawberries, some types of apples
- Quercetin: asparagus, capers, onions, lettuce, dark chocolate
- Resveratrol: grapes

Protective Food

This category includes foods that help us protect our body from hypertension, diabetes and obesity:

garlic, cereals, pot herbs (basil, oregano, sage, rosemary, mint, thyme...), legumes, olive oil, seed oil, (sunflower, pumpkin...), fresh fruit and vegetables (rich in vitamins and mineral).

Anticancer Food

A set of foods that are "friends" to our organism and slow down the proliferation of cancer-causing cells (some of them reduce inflammatory states where cancer finds fertile ground and others prevent or slow down its development...). This category includes:

turmeric (curcumin), ginger (gingerol), carrot (beta-carotene), blueberries and raspberries (delphinidin), soy, red clover, coffee (flavonoids, genistein), cruciferous like broccoli, cauliflowers, rocket salad, turnip greens, Brussels sprouts (isotiocinatin), grapefruit and tomato (lycopene), mint, cherries and lavender (perillyl alcohol), black pepper (piperine), lemon (hesperidin).

In case of allergies or intolerances, please contact our staff.
